## COVID-19 Update

# COVID-19 – What is the current situation?

# Trends in New Cases for Tameside (14/01/2022)

Current rate of new cases in the last seven days per 100,000 people is **1,122.3/100,000 (2,549 cases)**

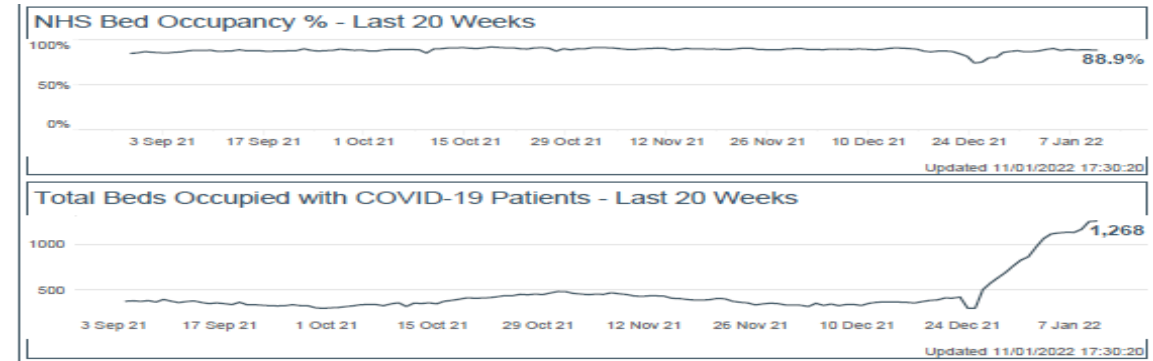

The rate has increased rapidly in recent weeks, however this is now declining again – data should be treated with caution due to changes in testing

Highest numbers of new cases in younger working age adults (20-40) but still increasing in children

# Impact of Covid in Tameside and GM

## Occupied Beds at T&G ICFT

■ Number of Beds COVID Occupied (CO2) ■ Number of Beds COVID Suspected (CO2)  
- - Occupied 7 Day Average - - Suspected 7 Day Average

The number of people in hospital with Covid-19 in GM and Tameside has increased in recent weeks

Overall we have not yet seen increases in intensive care usage for Covid patients in GM or Tameside but this continues to be monitored

## The current situation in Tameside

- Tameside has a similar rate of Covid to the rest of GM
- Rate of new cases has started to reduce but this should be treated with caution due to testing patterns and access – we may not be finding all the cases
- The positivity rate is extremely high – almost 1 in 2 tests coming back positive (45%)
- Numbers in children are still increasing and this may continue
- Guidance changes around testing
- Seeing high numbers of outbreaks and some large outbreaks – Care Homes
- Hospital activity has increased and there are indirect impacts in the health system and other public services due to staff absences and disruption to routine activity
- Ongoing pressure on all Council front line services. And on direct Covid response within Public Health; Adult Social Care; Public Protection; Education; Communications

# COVID-19 – What is driving the current situation?

## What is driving spread in Tameside? (1)

- The new Omicron variant of Covid-19 was discovered in late November and has spread rapidly across the globe since then, driving a huge spike in infections
- The Omicron variant is extremely infectious and is spreading more quickly and more easily than previous variants we have seen such as Alpha and Delta
- Omicron is now completely dominant across the country and in Tameside last week 100% of our cases were Omicron
- This has come at a time heading into winter when seasonal viruses spread easily and we have also had relatively few measures and restrictions in place to limit transmission
- Outbreaks are widespread across settings in the borough, some of which are particularly high risk such as care homes. This further spread adds to the overall numbers of infections
- We still see spread of infection linked to confined, crowded indoor spaces with inadequate ventilation

# COVID-19 – What can we do about it?

# Basic Measures to Prevent Transmission

- The same **basic measures** to reduce risk of transmission have been the same throughout the pandemic:
  - Regular, thorough handwashing with soap and running water
  - Wear a face mask/covering when in certain places
  - Social distancing from others of at least 2 metres
- Following the relevant **guidance & advice**
  - Regular testing
  - Work from home if you can
  - Covid passports at some venues
  - Limit close contact with other people
- **Get Vaccinated**
  - 76% of adults have had the booster in Tameside
  - Still seeing people for their first dose
  - Tackling inequalities in uptake
  - Vaccine bus / outreach

**WHERE TO BOOK OR WALK IN**

**Your COVID-19 Vaccination Guide in Tameside and Glossop**

Local Tameside and Glossop Vaccination Centres  
Book an appointment  
[tamesideandglossop.nhs.uk/vaccinations.co.uk](https://tamesideandglossop.nhs.uk/vaccinations)

or call 119

**3rd Dose qualifiers:**

- \* a blood cancer (such as leukaemia or lymphoma)
- \* a weakened immune system due to a treatment (such as steroid medicine, biological therapy, chemotherapy or radiotherapy)
- \* an organ or bone marrow transplant
- \* a condition that means you have a very high risk of getting infections
- \* a condition or treatment your specialist advises makes you eligible for a 3rd dose

PLEASE NOTE: Timings of 2nd and 3rd doses may vary in those commencing immunosuppressive therapy

**Had Covid?**  
Adults – wait 28 days  
Under 18s – wait 12 weeks  
From the first day of symptoms or the day of positive test result before you have your COVID-19 vaccination.

Correct as of Wednesday 1 January 2022

# Tackling the Pandemic

- **Test, Trace, Isolate**

- PCR Testing –
  - People with Covid symptoms **MUST** still go for a PCR test
  - wide availability of mobile and fixed sites for those with symptoms to get tested
- Regular Testing –
  - Take regular lateral flow tests when you don't have symptoms – before going in to higher risk situations / work
  - Supplies under pressure over Christmas but easing now – available online / pharmacies / Active Tameside / Libraries. Emergency stocks available
- Contact Tracing –
  - You should tell NHS Test & Trace who you have had contact with if you test positive
  - Unvaccinated contacts still need to isolate for 10 days
  - Contacts who are vaccinated / under 18 need to do daily LFTs for 7 days

# Covid PCR testing sites opening time

Get tested for coronavirus (COVID-19) if you have symptoms

Active Medlock, Gardenfold Way, Droylsden, Manchester M43 7XU

### Days of week

10th to 23rd January

### Hours

9am to 3pm

# Tackling the Pandemic

## Changes to Testing and Isolation Advice

- No longer required to take a confirmatory PCR test if you have a positive lateral flow test (still do a PCR if you have symptoms)
- Positive cases can test on day 5 and 6 and if both are negative can come out of isolation on day 6
- It's very important people register their test results online for our data and so they are followed up

**Keep telling us your test results** and help beat Covid-19

Join the millions who report all their rapid lateral flow test results and you'll play a big part in helping the NHS stay ahead of the virus.

Go to: [gov.uk/report-covid19-result](https://gov.uk/report-covid19-result)

The advertisement features a blue background with white and yellow text. It includes two QR codes, a red plus sign, and a green minus sign. Below the QR codes are two illustrations of lateral flow test strips, one showing a blue line and one showing two blue lines. At the bottom, there is a blue button with white text.

**From 17 Jan**

**New self-isolation guidance for people who test positive for COVID-19**

People may leave self-isolation after **5 full days** on day 6 if they test **negative twice**

**On days 5 and 6 of self-isolation, you should take a rapid lateral flow test 24 hours apart**

**If both tests are negative, you can stop self-isolating**

The infographic is a vertical scrollable page with a teal background. It features a red banner at the top with the date 'From 17 Jan'. The main text is in white and yellow boxes. There are illustrations of a person in a window, a person sitting on a sofa, and a person holding a test strip. The page has a scroll bar on the right side.

## Encouraging and Supporting people to Tackle Covid in Tameside

- **Ongoing messaging** – testing / vaccination
- **Engaging** with our communities to provide information and listen to concerns
- **Community Champions** programme
- **Supporting people and services** to follow guidelines and reduce spread
- The **vaccination programme** is vital and is tackling inequalities and supporting access
- **Support to isolate** – there are still support payments available for those needing to isolate and help via the council call centre (0161 342 8355)
